Section						

<b>4 Test result – test lists</b>						
<b>4.1 Marking of the control equipment</b>						
Inscriptions						
16.4	1. Present On rating plate of machine On/in Installation Site		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Inscriptions legible and permanent, with the following information:		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Manufacturer/supplier ██					
	4. Production No./Serial No. ██					<input type="checkbox"/>
	5. Rated voltage, number of phases, frequency ██					<input type="checkbox"/>
	6. Full-load current per incoming feeder ██					<input type="checkbox"/>
	7. Short-circuit rating of the equipment ██					<input type="checkbox"/>
	8. Main documentation No. ██					<input type="checkbox"/>
	9. Test mark ██					<input type="checkbox"/>
<b>4.2 Incoming supply conductor terminations/input terminals</b>						
5.1	1. Only one incoming supply conductor termination for the machine (R) (Exception possible)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.1	2. Supply conductor connected directly to the supply disconnecting and switching device (R)		<input type="checkbox"/>			
5.1	3. Supply conductor connected to separate supply terminals		<input type="checkbox"/>			
5.1	4. Insulated N terminal/connecting point, if N conductor present	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.1	5. Terminals for the incoming supply conductor connection point clearly marked (L1, L2, L3, N, PE in accordance with EN 60445)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.2	6. Terminal for the external protective earthing system or external PE conductor located close to the terminals for each phase conductor	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

5.2	7. Terminal for the external PE conductor marked "PE"	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.2 Table 1	8. Terminal for PE adequately dimensioned	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.2b	9. Incoming supply conductor terminals and N terminal (upstream of supply disconnecting and switching device) protected against contact (IP 2X)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.2b	10. Warning sign on terminals 	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.3 Supply disconnecting device</b>						
5.3.1 5.3.2	1. Supply disconnecting device for each incoming feeder, in the form of: – Switch-disconnector (e.g. cam-operated switch) – Circuit-breaker – Disconnecter with auxiliary contact – Any other switching device compliant with the IEC product standard which satisfies the requirements of EN 60947-1 and possesses a utilization category – Plug/socket or appliance coupler for a movable machine	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.1	2. Disconnection of the entire electrical equipment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.3	3. Disconnection of all live (non-earthed) conductors	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.3	4. N is also disconnected When the disconnecting device consists of a plug/socket combination	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.3.1 Excluded circuits (not switched off)</b>						
5.3.5	1. Lighting (for repair and maintenance purposes only)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Sockets (for repair and maintenance purposes only)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Undervoltage protection circuits	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Circuits for the maintenance of operation (Measuring device, program memory)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	5. Control circuits for interlocks	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.2b	6. Protection against accidental contact (shrouding) ≥ IP 2X or IP XXB with warning sign  on excluded circuits	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.5	7. Dedicated disconnecting device (R)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

5.3.5 (13.2.4)	8. Warning sign Or separate cable routing Or coloured marking in the case of interlock circuits with external power supply (recommended: orange)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.5	9. Reference in the maintenance handbook to non-disconnected circuits	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.5 16.1	10. Warning sign on the supply disconnecting device	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.8	11. Overcurrent protection provided for excluded (not switched off) circuits	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.8	12. No special overcurrent protection for the supply conductors (main conductor) Conditions: – Current-carrying capacity sufficient for the load, and – Supply conductor not longer than 3 m, and – Conductors protected against external influences by enclosure, or – By cable duct	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

#### 4.3.2 Supply disconnecting/switching capacity

	1. – Manufacturer: <input type="text"/> – Type: <input type="text"/> – Rated voltage: <input type="text"/> V – Rated current: <input type="text"/> A – Switching capacity (AC 23B): <input type="text"/> kW (380/400V) – Rating of the largest 3-phase motor: <input type="text"/> kW – Full-load current of all loads: <input type="text"/> A – Rating/current of the remaining loads: <input type="text"/> kW/A	} See rating plate of the control equipment				
5.3.3	2. Breaking capacity sufficient for the largest motor in the blocked state (AC23) and sum of all currents of the remaining loads	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.3	The supply disconnecting and switching device is:					
5.3.3	3. Manually operable – Handle: red (only with EMERGENCY STOP function) – Handle: black – Handle: grey	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.3	4. Can be locked in OFF position	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.3	5. Marked I (On)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.3	6. Marked 0 (Off)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

5.3.3	7. Only for two switching positions (On/Off)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.4	8. Handle easily accessible at a height of between 0.6 m and 1.7 m (max. 1.9 m) Input terminals of main switch:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.2b	9. Protected against accidental contact (IP 2X or IP XXB)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.2b	10. Warning sign on terminals 	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.1	11. Protective interlocking present (for dangerous situation) where two main switches are fitted	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.3.3 Plugs as supply/separating devices</b>						
5.3.3	Plug device with adequate switching capacity or additional switching device with adequate switching capacity	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5a)	Protection-level at least IP XXB		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5b)	Leading respectively delaying earthing contact		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5c)	Adequate switching capacity; where the rated current $\geq 30$ A additional switching device, connection or disconnection is only possible if the switching device is in the OFF position	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5d),e)	Where the rated current $> 16$ A or a dangerous situation is possible: interlocking device present in order to prevent unintentional or accidental disconnection.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5f)	Sockets/coupling continue to exhibit IP 2X or IP XXB following disconnection, with observance of the creepage and clearance distances		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.4 Protection against electric shock</b>						
<b>4.4.1 Protection against direct accidental contact</b>						
6.2						
6.2.2	1. Enclosure  Installation Site 1 <input type="text"/> Installation Site 2 <input type="text"/> Installation Site 3 <input type="text"/> Refer to the questions in <a href="#">Section 4.5, "Installation space"</a>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.3	2. The insulation of live parts be removed only by destroying Affected parts of the installation: <input type="text"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

6.2.4	3. Discharge of residual voltages: see Section 4.8, "Further requirements concerning equipment in the Installation Site "	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.5 6.2.6	4. Protection through cover, distance or barriers Affected parts of the installation:..... .....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.4.2 Protection against indirect accidental contact</b>						
6.3						
6.3.2.2	1. Protection by the use of Class II equipment (with protective insulation) or equivalent insulation – Complete machine – Components/parts of the installation: .....	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.3.2.3	2. Protective separation for one circuit only: Affected part of the machine: .....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.3.3	3. Automatic switching-off of the power supply in the event of an insulation fault – All exposed parts connected to the protective earth circuit (protective potential equalization of the exposed conductive parts) – Protective equipment for automatic switching-off Fuses Residual-current protective devices Earth-fault monitoring	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
6.3.3	4. Protective device matched to the system type, and requirements observed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.4.3 Protection by PELV against direct and indirect accidental contact</b>						
6.4						
6.4	1. Affected parts of the installation (circuits) ..... The following requirements of the section are met	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.4.1.a)	2. Max. rated voltage 25 V AC/60 V DC in dry rooms without contact over a large area		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.4.1.a)	3. Max. rated voltage 6 V AC/15 V DC in all other cases		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

6.4.1.b)	4. One side of the circuit is connected to the protective earth circuit		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.4.1.c)	5. Electrical separation corresponds to the separation provided by the safety isolating transformer between the primary and secondary windings		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.4.2	6. Supply for PELV by:		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	7. Safety isolating transformer to EN 61558-1 and EN 61558-2-6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	 Marking with  for fail-safe safety isolating transformer		<input type="checkbox"/>			
	 Marking with  for non-short-circuit-proof safety isolating transformer		<input type="checkbox"/>			
	 Marking with  for short-circuit-proof safety isolating transformer		<input type="checkbox"/>			
	8. Switched-mode power supply with safety transformers to EN 61558-2-17 marked as 7.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	9. Power supply with the same level of safety as a safety isolating transformer (e.g. motor generator set with equivalent separate windings)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	10. Electrochemical power supply (e.g. battery) or other power supply (e.g. diesel-powered generator)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	11. Inscriptions on the power supply: 		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	12. Marking on the circuit diagram: 		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	13. Live parts are safe isolated from the other circuits (e.g. by partitions, insulation for max. voltage, see EN 60204 Part 1, Sections 6.3.2.3 and 13.1.3)		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	14. Where plug devices are fitted:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.4.1.e)	15. Plug and socket compatible only with plug-and-socket devices for PELV circuits	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	16. Where PELV is used for a control circuit: The requirements for control circuits are also met	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO	FAULT	N/A	YES	NO	FAULT	N/A	YES	NO	FAULT
Section		Installation Site 1:				Installation Site 2:				Installation Site 3:			

<b>4.5 Installation Site (protection by enclosure)</b>													
16.2.1	1. Installation Site clearly recognizable If not:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	2. High-voltage flash symbol present (Black on yellow triangle)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.2.2	3. Installation Site contains no equipment (including solenoid valves) other than electrical equipment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>4.5.1 Doors/covers</b>													
6.2.2a	1. With locking closure	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.2.2a	2. With screw closure	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.2.2a	3. Can be opened only by means of a key or tool	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.2.2b	4. Opening without key/tool possible only following disconnection of the live parts from the system (e.g. supply disconnecting and switching device)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.2.2c	5. Opening without key/tool possible only when all live parts are reliably shrouded (test finger IP 2X or IP XXB)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.4	6. Captive closures/screws	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.4	7. Width of door/cover < 0.9 m; opening angle at least 95° (R)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.4	8. Vertical hinges on doors, preferably removable (R)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.2.1	9. Only control and signalling devices, instruments and cooling devices (fans) on doors/shrouds	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO	FAULT	N/A	YES	NO	FAULT	N/A	YES	NO	FAULT
Section		Installation Site 1:				Installation Site 2:				Installation Site 3:			

8.2.3	10. On doors and covers to which electrical equipment is fitted: moving PE conductor connections of adequate cross-section, or structure elements with low resistance	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.4	11. Permanent and secure fitting of seals	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>4.5.2 Protection level</b>													
6.2.1	1. Minimum degree of protection of IP 2X (12 mm); for upper, freely accessible shrouds, IP 4X (1 mm) or IP XXD	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.3	2. Ventilated enclosures (e.g. only housing starting resistors): minimum protection level IP 10	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.3	3. Ventilated enclosures (other components): minimum protection level IP 32	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.3	4. Enclosures for general use exhibit appropriate protection level (IP 32, IP 43, IP 54)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.3	5. Enclosures cleaned by low-pressure water jet: IP 55	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.3	6. Where fine dust is present: IP 65	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.4	7. Enclosures containing slip ring: IP 2X	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11.4	8. Penetration of apertures by water, dust, oil prevented, for instance with – Cable entries – Fixing holes – Base apertures (foundation) – Apertures to other parts of the machine	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4.4.6 4.4.7	9. Suitability where exposed to acids, corrosive gases, salt, radiation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

<b>4.8 Further requirements for electrical equipment in the Installation Site</b>						
4.2.1	1. Electrical components and equipment: – Are suitable for their intended use – Satisfy the IEC standards applicable to them – Are used in accordance with the manufacturer's instructions	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
4.2.2	2. The parts of the electrical equipment have been selected in accordance with EN 60439 (governing low-voltage switching devices combinations)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
4.3.1	3. The electrical equipment of the machine is rated such that it works correctly under the system supply conditions (intended use)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
11.2.3	4. Influencing of sub-assemblies by heat generating parts avoided	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	5. Equipment possesses adequate mechanical strength and is fitted securely; adjustment devices are protected where necessary against vibration	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.1	6. Suitable protective measures for all circuits which are galvanically isolated from the system (transformer) (See Section 4.4, "Protection against electric shock")	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.1	7. Within the electric equipment (behind the power input terminals), there is no connection between the PE and neutral	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.1	8. No PEN terminals are provided within the electrical equipment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.4	9. Residual voltage on live parts (such as capacitors, power converter terminals) is discharged to 60 V or less within 5 s of switching-off (if not: warning sign)  Where connector pins are accessible to touch, the max. discharge time is 1 s, or protection is provided against direct accidental contact (IP 2X or IP XXB)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.3.2	10. Manually actuated operating controls made of insulating material: (Class II), or connected to the PE conductor (See Section 4.4, "Protection against electric shock")	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.3	11. Conductors at different voltages and sharing the same cable duct are either: – Separated by means of suitable shrouding, or – Insulated for the maximum voltage occurring	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.1	12. Other supply voltages for certain parts of the equipment (for example for electronic equipment) are generated by equipment (such as transformers) forming part of the electrical equipment of the machine (R)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

	– Primary rated voltage: [REDACTED] V					
	– Secondary rated voltage: [REDACTED] V					
	– Rated current: [REDACTED] A					
	– Rated output: [REDACTED] VA					
	Primary-side connection:					
	– Between two phase conductors		<input type="checkbox"/>			
	– Between one phase conductor and N		<input type="checkbox"/>			
	[REDACTED]		<input type="checkbox"/>			
9.1.1	6. Transformer has separate windings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.3.1	7. Transformer is connected behind the supply disconnecting and switching devices	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.1.2	8. Secondary voltage does not exceed 277 V	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.4.3.1	<b>– Control circuit according to Method a) or b)</b>					<b>Transformer 2</b>
9.4.3.1	9. Earthed on the control-power transformer (also applicable to ELV and DC) (separable green/yellow connection to the PE system)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
17.6	10. Connection to PE system shown on circuit diagram	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.1.4	11. If Method b): One side of the actuating coils directly on the earthed conductor, switching contacts only on the non-earthed side	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	12. Other method, e.g. non-earthed with insulation monitoring	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.1.3	13. Overcurrent/short-circuit protection provided On the secondary side 1 x [REDACTED] A, marking according to circuit diagram [REDACTED] On the primary side [REDACTED] X [REDACTED] A, marking according to circuit diagram [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.4						
7.2.10						
7.2.10	14. Short-circuit protection of the contacts in the control circuit is assured	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.9	15. Overcurrent protection provided by electronic equipment with current limiting	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

<b>4.9.3 Without control-power transformer (Method c)</b>						
9.1.1	1. One motor starter, max. 2 control devices	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.1.3 7.2.4 7.2.10	2. Overcurrent/short-circuit protection provided and protection of the contacts assured 1 x <input type="checkbox"/> A (1 phase conductor), marking according to circuit diagram <input type="checkbox"/> 2 x <input type="checkbox"/> A (2 phase conductors), marking according to circuit diagram <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.4.3.1	3. Two-pole control switch where connection is between two phase conductors or between a phase conductor and N, when phase reversal (e.g. with Schuko-type plug) is possible (for start and stop function and possible hazard)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.9.4 DC control circuits</b>						
9.1.1	1. Where DC control circuits are connected to the PE system, they are supplied from a separate winding of the AC control-power transformer (or a separate transformer for DC supply)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.9.5 Access to switching devices</b>						
11.5	1. Doors in aisles for access to electrical operating areas; – At least 0.7 m wide and 2 m high – Opening outwards – Can be opened from inside without keys or tools	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
11.5	2. Walk-in enclosures equipped to permit flight (e.g. panic exit devices)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
11.5	3. In cases where equipment is likely to be under voltage and conductive parts exposed when the enclosures are accessed, the clear width is at least 1 m	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. In cases where such parts are located on both sides of the aisle, the clear width is at least 1.5 m	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.10 Control functions/electronic equipment</b>						
<b>4.10.1 Control equipment</b>						
9.1.1	1. Supply for electronic equipment (e.g. PLCs) by means of a transformer with separate windings or switched-mode power supply with transformer to EN 61558-2-17	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.5	2. Interruption and subsequent restoration of the supply does not lead to a hazardous state					

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

9.4.3.2	3. Content of memories is not lost where this would lead to a hazardous state	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.11 Stop functions, actions in an emergency</b>						
<b>4.11.1 Stop function</b>						
9.2.2	1. The machine is equipped with a stop function: – Stop Category 0 (immediate switching off of the drive energy; voltage may still be present, where it is not able to give rise to movement) – Stop Category 1 (controlled stop; Stop Category 0 following stopping) – Stop Category 2 (controlled stop; drive energy to the machine drives is retained)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.3	2. Stop function cancels start function	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Stop function Category 0 and 1 independent of the operating mode	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Stop Category 1 (controlled stop) for the following drives: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	5. Stop Category 2 (controlled stop, followed by position control) for the following drives: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.3	6. Stop Categories correspond to risk assessment and functional requirements	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	7. Stop command effective from any operator control station, where required by the risk assessment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.3 9.2.5.4.1 9.2.5.4.2 EN ISO 13849-1, 5.2.2	8. Manual reset of the stop function does not re-initiate motion of the machine, but merely permits restarting	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

<b>4.11.2 Actions in an emergency</b>						
9.2.5.4.2 Annex E	1. EMERGENCY STOP present (where hazards are presented by machine movements) Protection assured against accidental direct contact, emergency switching off not required	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.4.3 Annex E	2. EMERGENCY SWITCHING OFF present (where hazards are presented by electrical energy) Use of emergency stop in order to halt movements presenting a hazard is not necessary	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.8.1	EMERGENCY STOP and EMERGENCY SWITCHING OFF present Confusion prevented by the following means (e.g. device in enclosure in break-glass arrangement): [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.11.3 Equipment for EMERGENCY STOP and EMERGENCY SWITCHING OFF</b>						
9.2.5.4.2	1. EMERGENCY STOP in the form of stop Category 0 or 1 in accordance with risk analysis	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.7.1	2. In all hazard locations (workplace, control station) Hazard location 1: [REDACTED] Stop Category: [REDACTED] Hazard location 2: [REDACTED] Stop Category: [REDACTED] Hazard location 3: [REDACTED] Stop Category: [REDACTED] Hazard location 4: [REDACTED] Stop Category: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Devices for EMERGENCY STOP/EMERGENCY SWITCHING OFF easily accessible	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
EN ISO 13850, 4.4.3	4. Mechanically self-latching	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.7.4 10.8.4	5. Emergency switching off = supply disconnecting and switching device (Not with Stop Categories 1 and 2)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.8.3	6. Red handle on yellow background	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.8.2	7. Red pushbutton actuator, palm or mushroom actuator on yellow background	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.7.2	8. Foot-operated switch without mechanical protection (for emergency stop only)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.7.2	9. Pull-wire switch (secure against breakage, disengagement, etc.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.4.1	10. Switching on possible only following manual resetting of all actuated control elements	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

9.2.5.4.1	11. Resetting does not result in start-up	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.4.2	12. EMERGENCY STOP has priority in all operating modes	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.4.2 EN ISO 13850, 4.1.3	13. Switching off as rapidly as possible without the generation of further hazards	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.7.2	14. Contact members with positive opening action (EN 60947-5-1, Annex K) – Manufacturer: – Current (AC15-DC13)      A at      V – Max. permissible overcurrent protection according to manufacturer      A – Overcurrent protection present      A	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.9	15. Overcurrent protection of the contacts is assured	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	16. No operational switching off by means of EMERGENCY STOP/EMERGENCY SWITCHING OFF	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	17. Emergency switching off/emergency stop contacts act upon:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– On contactor relays		<input type="checkbox"/>			
	– On safety modules		<input type="checkbox"/>			
	– On frequency converters with integral STOP/safe stop or S1/safe stopping safety function)		<input type="checkbox"/>			
9.2.5.4.2	18. Only electromechanical switching devices employed for EMERGENCY SWITCHING OFF	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.7.1 EN ISO 13850, 4.1.1	19. Confusion of active and non-active EMERGENCY STOP devices in mobile operator control stations reduced to a minimum by the following means (e.g. instruction for users):	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

## 4.12 Control functions

### 4.12.1 Switch-off device for prevention of unexpected start-up

5.4	1. Present	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
5.4 See also ISO 14118 (EN 1037)	2. Device with disconnecter function (For disassembly of the machine, work on the electrical installation, adjustment and maintenance work) In the form c	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

	3. Supply disconnection and switching devices (5.3.2)		<input type="checkbox"/>			
	4. Switch-disconnectors		<input type="checkbox"/>			
	5. Removable fuse elements/isolating links in locked electrical operating areas		<input type="checkbox"/>			
	6. [REDACTED]		<input type="checkbox"/>			
5.4	7. Devices which do not fulfil the disconnecter function (Only for brief inspections, adjustments, limited work on the electrical equipment and without electric shock hazard) In the form of: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	8. Switch, lockable		<input type="checkbox"/>			
	9. Contactor, disconnected via the control circuit		<input type="checkbox"/>			
	10. [REDACTED]		<input type="checkbox"/>			
<b>4.12.2 Operation – interlocks – monitoring – start</b>						
7.5	1. Not a hazardous condition by restart after power failure and recurrent	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.6 (9.3.2)	2. Overspeed protection with restart interlock present (if necessary)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.8	3. If the phase sequence of the supply voltage is incorrect: – No hazardous state possible – No damage to the machine possible – Protective measure: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/>		<input type="checkbox"/>
9.3.3	4. Operation of auxiliary functions is monitored	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.3.5	5. No time-dependent switching-off during reverse-current braking (risk of direction reversal)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.3.5	6. No start-up when the motor shaft is turned	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.3.4	7. Interlock against contrary motion	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.1	8. Safety functions/protective measures (interlocks) required for safe operation are present	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.1	9. Measures have been taken to prevent commands emanating from different operator control stations from giving rise to a hazard	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.2	10. Operational start possible only when the conditions for switching on (e.g. guarding) are met	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

9.2.5.2	11. Where several operator control stations are required for initiation of starting:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Each control point has its own separate manual start facility	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– All start facilities are in the idle position (OFF)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– The start-up conditions prior to the start are met	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Simultaneous actuation (where applicable, selective by means of selector switches)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.6	12. Combined start-stop devices only for functions which do not give rise to a hazardous state	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.1	13. Start function by energization (connecting voltage to "1")	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.3.1	14. Resetting (by dropping into the closed position) of protective devices does not give rise to a hazardous start (For guards with start function, see 5.3.2.5, EN ISO 12100-2)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	15. Start commands which give rise to a hazardous state and are not executed immediately are not stored	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.5	16. Where machine components execute hazardous movements, monitoring is provided for example by travel limiters, motor overspeed detection, detection of mechanical overload, collision protection facilities	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.5	17. Hazardous movements can be observed from control points	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.5.5	18. The operator assumes the task of monitoring in the case of manually guided machines	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.12.3 Two-hand control</b>						
9.2.6.2	1. Present		<input type="checkbox"/>	<input type="checkbox"/>		
ISO 13851	2. Type 1: – Simultaneous and sustained actuation – When one control element is released: STOP Safety Performance Level: Tried-and-tested components	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
ISO 13851	3. Type 2: In addition to Type 1: – Both control elements must be released before a new start is possible Safety Performance Level: Single-fault tolerance	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

ISO 13851	4. Type 3: In addition to Type 1 and Type 2: – Synchronous actuation (0.5 s) Safety Performance Level: A = Category 1 (tried-and-tested components) B = Category 3 (single-fault tolerance) C = Category 4 (self-monitoring)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.6.2	5. Selection of the two-hand control corresponds to the risk assessment (see also: ISO 13851, "Two-hand control devices")	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.12.4 Enabling control</b>						
9.2.6.3	1. Present		<input type="checkbox"/>	<input type="checkbox"/>		
9.2.6.3	2. The enabling control is a manually activated interlock function of the control which:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.6.3	– When <b>actuated</b> , allows operation of the machine to be initiated by a separate start control	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.6.3	– If not actuated, initiates a stop function and prevents initiation of machine operation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.6.3	3. The enabling control must be deactivated before operation of the machine can be initiated again	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.6.3	4. The enabling control cannot be circumvented by simple means	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.9	5. Devices for the enabling control exhibit the following characteristics: <div style="background-color: #cccccc; height: 15px; width: 100%;"></div>		<input type="checkbox"/>	<input type="checkbox"/>		
10.9	6. They are designed in accordance with ergonomic principles	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.9	7. Type with 2 switch positions: – Position 1: OFF function (not actuated) – Position 2: Enabling function (actuated)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.9	8. Type with 3 switch positions: – Position 1: OFF function (not actuated) – Position 2: Enabling function (actuated, in centre position) – Position 3: OFF function (actuated, beyond centre position) – No enabling when the switch is returned from Position 3 back to Position 2	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

4.12.5 Wireless controls						
9.2.7.1	1. The power supply to the operator control station can be removed or interrupted easily	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Unauthorized use of the operator control station is prevented by the following measures: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Unambiguous indication of which machine is controlled by the operator control station	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.7.2	4. Precautions are taken to ensure that control commands only – Act upon the relevant machine – Act upon the specified function Measure: [REDACTED]	<input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/>		<input type="checkbox"/> <input type="checkbox"/>
	5. Precautions have been taken to ensure that the machine does not respond to signals other than those emanating from the operator control station Type of precautions: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	6. Where necessary, the machine can be controlled only in predefined zones or areas Type of precautions: [REDACTED]	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.7.3	7. Operator control station possesses equipment for initiation of the stop function This equipment is not marked or labelled as Emergency Stop		<input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/>		<input type="checkbox"/> <input type="checkbox"/>
	8. Safety-related signals and processing of control signals correspond to the risk assessment		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.7.4	9. Where several operator control stations are used: – Precautions are taken to ensure that only one operator control station is enabled at any one time – Indication present of which operator control station controls which machine – Indication at suitable points (risk assessment) – Stop command effective from each operator control station where shown to be necessary by the risk assessment	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>
9.2.7.5	10. A change in battery voltage does not give rise to a hazardous state Where battery-powered operator control stations may give rise to hazardous movements: warning in the event of a change in battery voltage (specified limits) Sufficient time available for the machine to be placed in a non-hazardous state	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>		<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>

<b>4.12.8 Measures for risk reduction in the event of failure</b>						
9.4.2.1	1. The measure of proven circuit techniques and components includes: – Earthed control circuit – Connection of the control devices in accordance with EN 60204-1 Section 4.3.1 – Stopping by de-energization – Switching of all live conductors to the device being controlled – Use of switching devices with positive opening – Circuit design measures which reduce the possibility of faults giving rise to undesired operating states	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.4.2.2	2. Redundancy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.4.2.3	3. Diversity – By combination of break and make contacts, actuated by interlocking guards – Use of components of different type in the control circuit – Combination of electromechanical and electronic circuits in redundant arrangements – Combination of electrical and non-electrical (e.g. mechanical, hydraulic, pneumatic) systems	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.4.2.4	4. Function test – Automatic by the control system, at intervals of: <input type="checkbox"/> – Manual during inspections or start-up testing, at intervals of: <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	5. Fault-mode behaviour is appropriate in consideration of the risk	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.13 Control and signal devices</b>						
10.1.2	1. Easily accessible (at a height of $\geq 0.6$ m)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.1.2	2. Can be operated safely	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.1.1 10.6	3. The danger of inadvertent actuation is low, particularly for start functions; mushroom-head actuators may be used for two-hand controls	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.1.3	4. Protected against external influences (corrosive fluids, vapours, gases; chips, dust, foreign objects), e.g. IP 54/IP 55; protection against accidental contact: IP XXD	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

10.1.2	5. Foot-operated pushbutton can be operated in the normal work position	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.13.1 Pushbutton</b>						
10.2.1	1. Red mushroom-head button for EMERGENCY SWITCHING OFF only	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.2.2	2. Clearly marked (e.g. I or 0) (R)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
16.3	3. With indication of the function (text or pictogram)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.13.2 Colour marking of pushbuttons</b>						
10.2.1	1. Stop/Off: BLACK, GREY, WHITE, (RED) <u>Not GREEN</u>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.2.1	2. Start/On: <u>WHITE</u> , GREY, BLACK, (GREEN) <u>Not RED</u>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.2.1	3. Inching mode: WHITE, GREY, BLACK <u>Not RED, YELLOW, GREEN</u>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.2.1	4. Intervention in the event of an abnormal condition: YELLOW	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.2.1	5. Mandatory state (e.g. reset): BLUE	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.2.1	6. Initiation of the normal state: GREEN	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
9.2.6.4 10.2.1	7. Pushbutton with double command only for functions which do not lead to a hazardous state Marking: WHITE, GREY, BLACK <u>Not RED, YELLOW, GREEN</u>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.2.1 Table 3	8. Where the same colours are used, for example for On/Off (WHITE/GREY, BLACK): unambiguous, additional marking by structure, shape, location	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.5	9. Rotary switches (e.g. selector switches, potentiometers) protected against rotation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	10. Switch position unambiguously recognizable	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.13.3 Indicator lights/illuminated pushbuttons</b>						
10.3.1 10.3.2 Table 4	1. The following colours are used for the "Display" form of application (information or action following illumination):	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– RED (emergency, hazard, immediate action necessary)		<input type="checkbox"/>			<input type="checkbox"/>
	– YELLOW (abnormal state, intervention necessary)		<input type="checkbox"/>			<input type="checkbox"/>
	– GREEN (normal state, safe condition)		<input type="checkbox"/>			<input type="checkbox"/>
	– BLUE (mandatory action, resetting)		<input type="checkbox"/>			<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

10.3.1 10.3.2 Table 4	2. The following colours are used for the " <b>Acknowledgement</b> " form of application (illumination following action):	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– White (command or state is confirmed)		<input type="checkbox"/>			<input type="checkbox"/>
	– Blue (command or state is confirmed)		<input type="checkbox"/>			<input type="checkbox"/>
	– Green (in special cases)		<input type="checkbox"/>			<input type="checkbox"/>
10.4	3. White is used for illuminated pushbuttons to which no obvious colour can be assigned	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.4	4. On an Emergency Switching Off control element, the red colour is not dependent upon the illumination	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.3.1	5. Lamps and screens visible from the operator's normal position	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.3.1	6. Proper operation of warning lamps can be tested	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.3.2	7. Where lamps are arranged in columns, the colours are used in the following order, from top to bottom: RED, YELLOW, BLUE, GREEN, WHITE	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

#### 4.14 Machine (frame)

8.2.3	1. Exposed conductive parts of the machine connected to the PE system: – Separate PE connection	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. PE connection is:					
	– Permanent		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Conductive (See Section 4.7, "Protective earth circuit (PE)")		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
8.2.6	– Marked		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Of adequate cross-section		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2	3. Protection against direct accidental contact with live parts in and on the machine:					
6.2.2	4. Protection by enclosure	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Can be opened only by means of a key or tool ██		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Live parts switched off prior to opening ██		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Degree of protection at least IP 2X or IP XXB ██		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

6.2.3	5. Protection by complete, permanent insulation of live parts ██	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.2.6	6. Protection by placing out of reach or by obstacles ██	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.4	7. Protection against direct accidental contact; for indirect accidental contact, protection by PELV ██ (See Section 4.4, "Protection against electric shock")	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.15 Electrical control devices on the machine</b>						
<b>4.15.1 Control devices (position switches, pressure switches, encoders)</b>						
10.1.3 13.4.1	1. Have a degree of protection (IP), including cable entries which provides adequate protection against the ingress of impurities (eg wood chips, dust, foreign body)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.1.3	2. Are protected against the influence of corrosive fluids, vapours or gases	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.1.2	3. Are readily accessible for maintenance purposes	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
10.1.2	4. Are fitted such that they cannot be damaged by activity on the machine (such as the transport of material)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.3.2	5. Possess total insulation (including cable glands), or	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
6.3.3 6.4	6. Are fitted with a PE connection (also applies to extra-low voltage, except PELV) If not, affected devices: ██	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
11.2.1	7. Plug-in control devices must be clearly assignable by unambiguous characteristics (such as shape, marking, designation)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.15.2 Position sensors (position switches, proximity switches)</b>						
9.3.2	1. Exceeding of an operating limit (position, end position) prevented by:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Mechanical facility		<input type="checkbox"/>			
	– Integration of position sensors into the control system		<input type="checkbox"/>			
10.1.4	2. Position sensors are arranged such that they cannot be damaged when overrun	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

10.1.4	3. Position sensors in circuits with safety-related control functions take the form of:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Mechanical position switches with positive opening operation in accordance with EN 60947-5-1 (VDE 0660-200, Section 3)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	– Proximity switches with a comparable level of safety in accordance with EN 60947-5-3 (VDE 0660-214)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

<b>4.16.3 Moveable cables</b>						
13.4.3	1. Are flexible, multistranded, and exhibit high bending fatigue strength	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Protected by:					
13.4.3	– Flexible metal tubes		<input type="checkbox"/>			
13.4.3	– Plastic tubing		<input type="checkbox"/>			
13.4.3	– Special cable type		<input type="checkbox"/>			
13.4.3	3. No tensile or sharp bending stress (e.g. on cable glands)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.3	4. Bending radius $\geq 10 \times$ outside diameter	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.3	5. Distance between moving cables and moving machine parts $\geq 25$ mm, or partitions	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.3	6. Flexible metal protective tubing not used in cases of rapid and frequent movement	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	7. Flexible cables on machines protected and/or the following abuse not possible: – Being driven over by vehicles or other machinery – Contact with the body of the machine during the movement – Running into/out of cable baskets or onto/off cable drums – Acceleration forces and wind forces for cable festoon systems or overhead lines – Excessive friction caused by cable mounts – Effect of excessive radiant heat	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	8. No torsional stress (deflection $< 5^\circ$ ) during: – Winding onto and off cable drums – Entry into or exit from the cable guidance systems – Two windings remain on the cable drum – Bending radii in accordance with EN 60204-1, Table 8 are observed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.16.4 Connected to the PE system</b>						
8.2.1	1. Cable ducts/conduits/swivel arms manufactured from metal	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
8.2.3	2. Flexible metal tubes including entry plates	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Cable drag chains manufactured from metal	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Cable glands manufactured from metal	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Section						

<b>4.16.5 Minimum cross-sections (see EN 60204-1, Table 5)</b>						
12.2	1. Outside protective enclosures					
	Permanently installed main circuits, single-core, flexible Class 5 or 6: 1.0 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Permanently installed main circuits, single-core, solid Class 1 or multi-core Class 2: 1.5 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Permanently installed main circuits, multi-core: 0.75 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Main circuit with frequent movement, single-core, flexible Class 5 or 6: 1.0 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Main circuit with frequent movement, multi-core: 0.75 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Control circuits, single-core: 1.0 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Control circuits, multi-core: 0.2 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Control circuits, two-core, not shielded: 0.5 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Data transmission cables: 0.08 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Control circuits, two-core, not shielded: 0.5 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Within enclosures					
	Main circuits, immobile connections: 0.75 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Control circuits: 0.2 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Data transmission cables: 0.08 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. For aluminium conductors, cross-sectional area of at least 16 mm <sup>2</sup>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Frequently moved conductors are of flexible and stranded type	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.16.6 Terminal and junction boxes</b>						
13.5.8	1. Terminals in easily accessible, robust enclosures	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.5.8 13.4.1	2. Appropriate degrees of protection (e.g. IP 44), including cable entries	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.2	3. Cable terminations of sufficient length	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.2	4. Cable entries with strain relief	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.1	5. One terminal for each core, or specially suited terminals for multiple cores	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.2	6. All control lines from terminal to terminal (without intermediate connection within or outside the boxes); plug-and-socket combinations are not regarded as connectors in this context	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

13.3	7. All control lines connected by means of terminals or plug-and-socket devices (direct connection possible only on main circuits and measuring circuits)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.4	8. Intermediate terminals for the control of complex machines (e.g. for position sensors/pushbuttons) present and indicated on the circuit diagram (R)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
8.2.3	9. Metal enclosure, connected with good conductivity to PE	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
8.2.6	10. PE connections marked ( $\text{⏚}$ , green/yellow, PE)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.1	11. PE connections secure against working loose	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.1	12. Only one PE connection on each terminal	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.2.2	13. PE: green/yellow	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.1	14. Terminals marked	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.1	15. Terminals not obscured by cables	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.7	16. Reserve cores connected to reserve terminals or isolated	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.1	17. Conductor terminations fitted with cables sleeves (exceptions possible)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.1.3	18. Where laid together, cables are isolated for max. voltage	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.2	19. Cable glands suitable for the ambient conditions	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.2	20. No tensile stress caused by dead weight on hanging control stations	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.16.7 Connectors, requirements do not apply to bus systems</b>						
13.4.5	1. Supply side on the protected sockets	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 b) + 8.2.4	2. PE connection (pin) early-make at insertion and late-break at withdrawal (exception for example for connectors to EN 60204-1 Section 15.4.5)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 g)	3. Metal enclosure connected to PE (not on PELV)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 a) +	4. Contact with live parts not possible during insertion or withdrawal	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 +	5. Latching connectors (in order to prevent inadvertent disconnection):					
d)	– With rated currents of over 16 A	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
e)	– When disconnection may give rise to a hazard	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
h)	– When not intended for disconnection under load; clear marking also necessary	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

13.4.5 c) +	6. Plug/socket devices which are intended for disconnection and connection under load must possess adequate load switching capacity; at 30 A and above, connection or disconnection under load must be prevented	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 i)	7. Unambiguous marking (preferably also mechanical coding) where multiple connectors are used	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 k)	8. No use of domestic connectors	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 k)	9. When using EN 60309-1 plug/socket combinations in control circuits only contacts are used, which are intended for such purposes; except for RF signals that are transmitted via a power supply line	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 f)	10. The degree of protection of parts which remain under voltage following disconnection is at least IP 2X or IP XXB; exception: PELV	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
13.4.5 j)	11. Plug/socket combinations in control circuits satisfy the requirements of EN 61984	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.5	12. Circuits for sockets with overcurrent protection in all live (non-earthed) connectors	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	Note: one or more of these requirements must be met					

#### 4.17 Sanding lines and Slip Rings

12.7.1	1. Protection against direct accidental contact assured by: <ul style="list-style-type: none"> <li>- Partial insulation of the live parts</li> <li>- Enclosures or shrouding with degree of protection of at least IP 2X</li> </ul>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Horizontal surfaces of shrouds or enclosures which are easily accessible have degree of protection of at least IP 4X	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Protection by distance in conjunction with switching-off in an emergency situation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Sanding lines arranged or protected such that: <ul style="list-style-type: none"> <li>- Accidental contact with conductive parts where sanding lines are unprotected is not possible</li> <li>- Vibrating loads are not able to cause damage</li> </ul>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
12.7.2	5. PE leads do not carry current	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	6. PE leads and neutral leads have separate sanding lines and slip rings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	7. Uninterrupted connectivity to the protection earth circuit assured by the application of suitable measures (such as doubling of current collectors, monitoring of the uninterrupted connection)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

12.7.3	8. Current collector for the PE lead not interchangeable with other collectors	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
12.7.4	9. Removable current collectors with switch-disconnector function have a protective earth circuit which is late-break during switching-off and restores connectivity with early-make during switching-on	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
12.7.5	10. Clearances correspond to Overvoltage Category III (see EN 60664-1)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
12.7.6	11. Creepage distances: In exceptionally dusty, damp or corrosive environments: – Unprotected sanding lines and slip rings possess insulators with a creepage distance of at least 60 mm – Encapsulated sanding lines, insulated multipole sanding lines and insulated single pole sanding lines have creepage distances of at least 30 mm	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	12. Manufacturers recommendations concerning gradual deterioration in the insulation values are observed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
12.7.7	13. If the slip ring is arranged such that it is possible to subdivide into separate sections: The placing of adjacent sections under voltage by the current collectors is prevented	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
12.7.8	14. Sanding lines and slip rings arranged in separate groups for main and control circuits	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	15. Sanding lines and slip rings are short-circuit proof		<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	16. Where slip ring systems are located underground or underfloor: – Removable shrouding can be removed only with the aid of tools – Metal shrouds are conductively connected to each other and earthed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	17. Where sanding lines are located in common metal enclosures, enclosure sections are connected conductively to each other and earthed at multiple points	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	18. Underground and underfloor sanding lines ducts are equipped with drainage facilities	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	19. Covers or shrouds of metal enclosures or underground ducts are earthed	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	20. Uninterrupted connectivity to the protection earth circuit where hinges are of metal	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

<b>4.19 Overload, overcurrent (short-circuit) protection</b>						
<b>4.19.1 Motors</b>						
14.1						
7.3.1	1. With ratings of > 0.5 kW have overload protection, detection and interruption of all live leads except N	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.3.1	2. Where interruption is not acceptable, a warning signal is issued	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.9	3. Motor overload protection (bimetal motor protection switch), correctly adjusted (see motor table, Section 4.18) Type of overload protector: _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.3.1	4. Restarting following tripping prevented (where necessary)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.3.1	5. Overload protection by means of thermal protection or similar (possibly with additional protection for blocked rotor or single-phasing)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.8	6. Short-circuit protection (back-up fuse) assured of motor protective switches, bimetal relays, MCBs (Indication on rating plate and in lists)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.4	7. Overtemperature protection provided in heating circuits (e.g. in short-time duty)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.7	8. Transformers possess suitable overcurrent protection	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.19.2 Circuits (wires) – current-carrying capacity</b>						
12.4 7.1	1. Wires rated for maximum possible continuous current; see EN 60204-1, Table 6 and Annex D	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
12.4 7.2 6.3.1	2. Wires adequately protected against overcurrent (short-circuit, for example in the event of an insulation fault) by suitable protective equipment; see EN 60204-1, Annex D	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
7.2.8	3. No overcurrent protection behind of the main wire Short-circuit hazard prevented by the following measures: – Current-carrying capacity adequate for the load, and – Power supply cable not longer than 3 m, and – Protected against external influences by enclosure or cable duct	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

<b>4.20 Accessories and lighting</b>						
<b>4.20.1 Lighting</b>						
15.2.1						
	1. Incorporated into protective measures by:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. PE connection		<input type="checkbox"/>			
	3. Protective insulation		<input type="checkbox"/>			
15.2.3 15.2.2	4. Dedicated overcurrent protection in all non-earthed wires	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.2.2	5. Rated voltage below 50 V (R), max. 250 V	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.2.2	6. Supply by separate transformer with separate windings and overcurrent protection on secondary side		<input type="checkbox"/>			
15.2.2	7. Supply from circuit for the machine equipment		<input type="checkbox"/>			
15.2.2	8. Transformer connected: In front of supply disconnecting and switching devices Behind supply disconnecting and switching devices For other alternatives and requirements, see EN 60204-1, Section 15.2.2		<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>			
15.2.4	9. Adjustable lamps: Suitable for workshop use/ambient conditions	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.2.4	10. Lamp sockets manufactured from insulating material and protected against inadvertent contact	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.2.4	11. Reflector not held by the lamp socket	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.2.1	12. On/Off switch not in lamp socket and supply line	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.2.1	13. No stroboscopic effects caused by lighting	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
<b>4.20.2 Accessories</b>						
15.1	1. Sockets if possible to EN 60309-1 up to 16 A, otherwise with indication of the voltage and current values	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.1	2. Separate overcurrent/overload protection	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
15.1	3. PE connection fitted for accessories	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

<b>4.21 Verification</b>						
18.1	1. If the scope of the inspections is not governed by a product standard, they must always include points a), b) and f), and may include one or more of points c) to e):	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	a) Inspection of whether the electrical equipment complies with its technical documentation		<input type="checkbox"/>			
18.2	b) Inspection of the conditions for protection against automatic switching off		<input type="checkbox"/>			
18.3	c) Insulation resistance test		<input type="checkbox"/>			
18.4	d) Voltage test		<input type="checkbox"/>			
18.5	e) Protection against residual voltage		<input type="checkbox"/>			
18.6	f) Function tests		<input type="checkbox"/>			
<b>4.21.1 Inspection of the conditions for protection against automatic switching off of the power supply</b>						
18.2.1	1. Verify the conditions for the automatic shutdown of power supply by the Tests 1 and 2	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
18.2.1	2. The machine to be inspected is intended for connection to a TN system For TT and IT systems, see IEC 60364-6 (VDE 0100-610)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
18.2.3	3. Inspections at the site of erection of the machine/on the construction site must be performed in consideration of the state of completion of the machine. (Refer in this context to EN 60204-1, Table 9) – Test 1 required – Test 2 required	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Section						

4.21.1.2 Test 2: Earth-fault loop impedance and suitability of the overcurrent protective device							
18.2.2	1.	Power supply and external PE earth securely connected (visual inspection)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
18.2.2	2.	Compliance with the criteria for protection by automatic switching off of the power supply is confirmed by: Testing of the earth-fault loop impedance by: – Compliance with EN 60204-1, <u>Table 10</u> or – <u>Measurement</u> in accordance with A.4, or – <u>Calculation</u> Verification of the parameters and settings of the overcurrent protective devices	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
18.2.2 Table 10	3.	Earth-fault loop impedance – <u>EN 60204-1, Table 10</u> :  Table 10 lists examples of maximum cable/wire lengths between each protective device and its load.  Requirements concerning the earth-fault loop impedance can be considered met when the maximum lengths stated in Table 10 are not exceeded and the assumptions stated there are considered.  Deviation from these assumptions may necessitate complete calculation or measurement of the earth-fault loop impedance  Circuits affected are:  <div style="background-color: #cccccc; height: 20px; width: 100%;"></div>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
18.2.2 Annex A.4.2	4.	Earth-fault loop impedance – <u>Measurement</u> :  Performance of measurement of the earth-fault loop impedance with measurement apparatus corresponding to EN 61557-3 (VDE 0413-3).  During measurement: – The machine must be connected to a power supply corresponding to the intended installation – The measured value of the earth-fault loop impedance must satisfy the requirements of A.2: $Z_s \times I_a \leq U_0$ – Consideration must be given to the increase in conductor resistance resulting from the increased temperature caused by the fault current – Test 1 must have been performed beforehand.  Typical measurement arrangement for measurement of the earth-fault loop impedance on a machine as shown in EN 60204-1, Fig. A.1	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Section						

	3. Maintenance handbook for skilled personnel; Community language understood by the skilled personnel	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
17.8	4. The instruction handbook contains instructions on adjustment, maintenance and repair, specifically for equipment and circuits with a protective function <ul style="list-style-type: none"> <li>- Emergency Switching Off/Stop category</li> <li>- Moving guard</li> <li>- Set-up mode</li> <li>- Manual mode</li> <li>- <span style="background-color: #cccccc; display: inline-block; width: 100px; height: 1em;"></span></li> <li>- <span style="background-color: #cccccc; display: inline-block; width: 100px; height: 1em;"></span></li> </ul>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
17.2	5. If applicable, information on the physical environment (lighting, shocks, atmospheric pollutants)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
17.8	6. Maintenance handbook available	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	7. Containing measures for: <ul style="list-style-type: none"> <li>- Adjustment</li> <li>- Maintenance</li> <li>- Monitoring</li> <li>- Repair</li> </ul>	<input type="checkbox"/>	<input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

## 5.2 Requirements concerning all documentation

17.3	1. Reference to the various parts of the documentation by one of the following methods: <ul style="list-style-type: none"> <li>- Cross-reference to all other documentation concerning the electrical equipment</li> <li>- Compilation of all documents with document number/title in a list of drawings or documents</li> <li>- Compilation of all documents on one level with document number/title in a parts list of the same</li> </ul>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
17.3	2. Documentation in accordance with EN 61082	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. References in accordance with EN 61346	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Manuals in accordance with EN 62079	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	5. Parts lists in accordance with EN 62027 Class B	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

## 5.3 Documentation for setup

17.4	1. The installation plan contains all information required for preparatory work for erection of the machine	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Information on the recommended location and the type and cross-section of the supply cables and wires is clearly indicated	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

Testing based on: EN 60204-1: 2006-06	Electrical equipment of machines	N/A	YES	NO		FAULT
Section						

	3. The data required for selection of the type, parameters, rated current and settings of the overcurrent protective equipment for the supply lines	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Dimensions, purpose and arrangement of all cable ducts to be provided by the operator in the foundation are indicated	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	5. Space for extension or maintenance stated on the drawing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	6. Interconnection diagrams/-tables available	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

#### 5.4 Block diagrams

17.5	1. Block diagram available if applicable	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
------	--	--------------------------	--------------------------	--------------------------	--	--------------------------

#### 5.5 Circuit diagrams

17.6	1. Circuit diagrams available	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	2. Plan for interface connections, if applicable combined with circuit diagram	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	3. Information on load currents, peak starting currents and permissible voltage drops	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	4. Symbols displayed in the switched off state	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	5. With all supply equipment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	6. Parameters relating to the function of the control devices and components and which are not identifiable by their symbolic presentation are indicated on the plans close to the symbols or in a footnote	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>
	7. Information on programming methods, program review, work process including additional safety precautions, monitoring intervals, and frequency and form of function tests	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>

#### 5.6 Information to be provided, circuit diagrams, parts lists

17.2	1. Circuit diagrams
